Lavanya

As a Computer Science student, I am seeking opportunities in the IT and software industry to apply and further develop my programming, analytical, and technical skills. My goal is to build a long-term career in a dynamic organization where I can leverage my expertise to contribute to the company's growth while also advancing my personal and professional development.

Project

Object Detection App | *HTML, CSS, PYTHON (FLASK), OpenCV*

Developed an object detection application using HTML, CSS, and Python (Flask), integrating YOLO for real-time object detection and OpenCV for image processing.

AgroCulture| *HTML, CSS, SQL, PHP, XAMPP*

A web application aimed at connecting farmers and buyers directly without intermediaries. Built using HTML, CSS for frontend, SQL for database management, PHP for server-side scripting, and XAMPP for local development environment.

Spotify Playlist | *Python*

A Python project that retrieves and displays the top 100 songs from a selected date in past years using the Spotify API. Users can select a specific date to view historical music trends.

Snake Game | *Python*

Developed a Python version of the classic Nokia Snake game, implementing game mechanics and graphics using Python's libraries and frameworks.
